

PnP-ADMM sensitivity analysis — motivating TFPnP
(LIDC-IDRI, 30-view parallel beam, DRUNet denoiser, 5% noise)

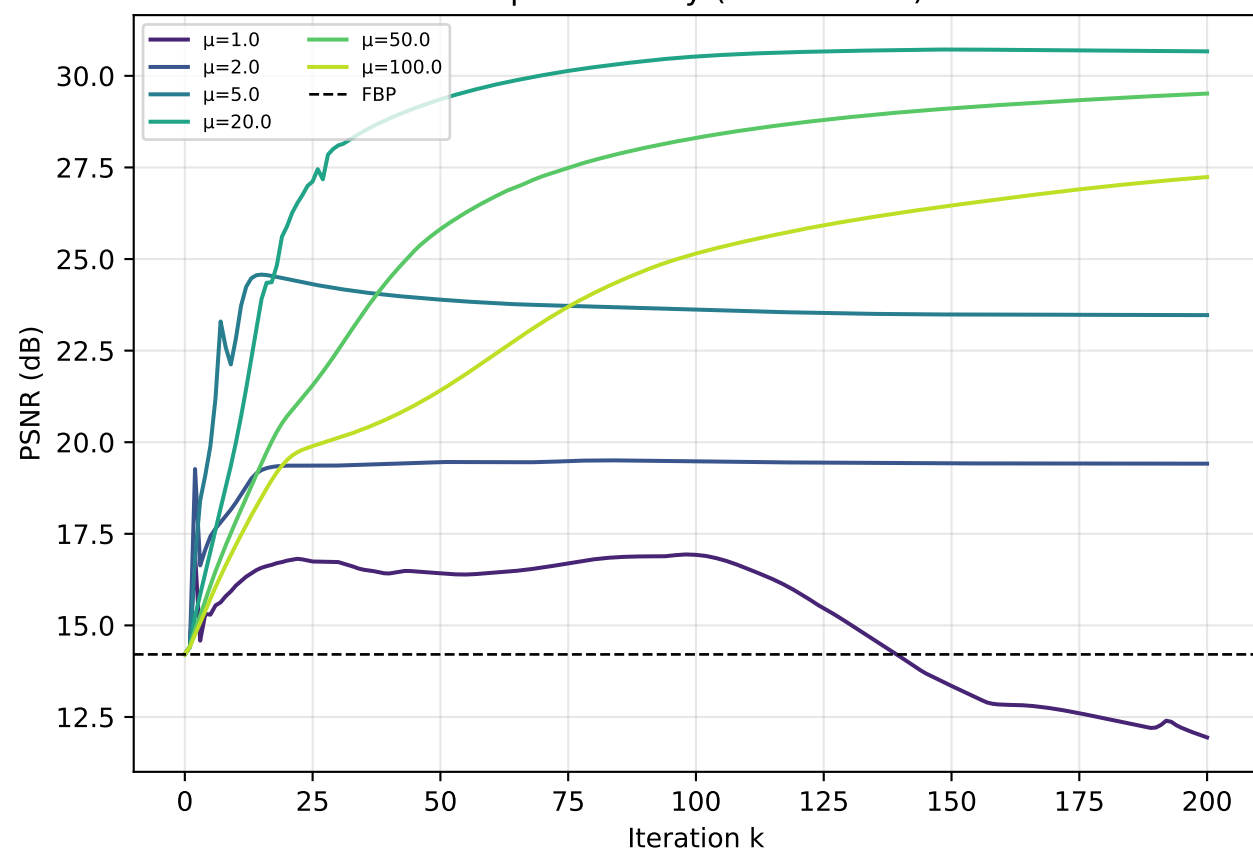

A: PnP-ADMM + DRUNet converges to +16 dB over FBP

B: σ sensitivity ($\mu=20.0$ fixed)

C: μ sensitivity ($\sigma=2.0$ fixed)

D: Same σ , opposite outcomes on two images
